

READY TO CARE WISCONSIN

More ways your pharmacist could help.

Why change pharmacy law?

Reform could give pharmacists more ways to use their training to help patients. The law would still set limits, and some concerns would need another health professional.

[Learn about pharmacy standard of care reform in Wisconsin.](#)

READY TO CARE WISCONSIN

Pharmacy care and your next step

The idea

Standard of care means what a reasonably careful pharmacist would do in a similar situation. Reform could expand their authority within legal limits.

What would still matter

The pharmacist would need enough information, appropriate training, and a pharmacy equipped for the care. Some concerns need a doctor or another health professional.

A question you can ask today

“What services do you offer, and what would my next step be?” Availability and insurance coverage vary.
